WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

1 Safety Precaution

1.1. General Guidelines

1. IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by

⚠ in the Schematic Diagrams, Circuit Board Layout, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent X-RADIATION, shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

2. An Isolation Transformer should always be used during the servicing of AC Adaptor whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks. It will also protect AC Adaptor from being damaged by accidental shorting that may occur during servicing.
3. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
4. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
5. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.

1.2. Leakage Current Cold Check

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between $1\text{ M}\Omega$ and $5.2\text{ M}\Omega$. When the exposed metal does not have a return path to the chassis, the reading must be infinity.

1.3. Leakage Current Hot Check (See Figure 1.)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a $1.5\text{ k}\Omega$, 10 W resistor, in parallel with a $0.15\text{ }\mu\text{F}$ capacitor, between each exposed metallic part on the set and a good earth ground, as shown in Figure 1.
3. Use an AC voltmeter, with $1\text{ k}\Omega/\text{V}$ or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed 0.75 V RMS. A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed $1/2\text{ mA}$. In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

Hot-Check Circuit

Figure. 1

1.4. How to Discharge the Capacitor on Flash PCB

CAUTION:

1. Be sure to discharge the capacitor on FLASH PCB.
2. Be careful of the high voltage circuit on FLASH PCB when servicing.

[Discharging Procedure]

1. Refer to the disassemble procedure and Remove the necessary parts/unit.
2. Put the insulation tube onto the lead part of Resistor (ERG5SJ102:1k Ω /5W).
(an equivalent type of resistor may be used.)
3. Put the resistor between both terminals of capacitor on FLASH PCB for approx. 5 seconds.
4. After discharging confirm that the capacitor voltage is lower than 10V using a voltmeter.

Fig. F1

2 Warning

2.1. Prevention of Electro Static Discharge (ESD) to Electrostatically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by electro static discharge (ESD).

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any ESD on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging ESD wrist strap, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an antistatic solder removal device. Some solder removal devices not classified as "antistatic (ESD protected)" can generate electrical charge sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION :

Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity (ESD) sufficient to damage an ES device).

2.2. How to Recycle the Lithium Ion Battery (U.S. Only)

ENGLISH

A lithium ion/polymer battery that is recyclable powers the product you have purchased. Please call 1-800-8-BATTERY for information on how to recycle this battery.

FRANÇAIS

L'appareil que vous vous êtes procuré est alimenté par une batterie au lithium-ion/polymère recyclable. Pour des renseignements sur le recyclage de la batterie, veuillez composer le 1-800-8-BATTERY.

2.3. Caution for AC Cord (For EB/GC/SG)

2.3.1. Information for Your Safty

IMPORTANT

Your attention is drawn to the fact that recording of pre-recorded tapes or discs or other published or broadcast material may infringe copyright laws.

WARNING

To reduce the risk of fire or shock hazard, do not expose this equipment to rain or moisture.

CAUTION

To reduce the risk of fire or shock hazard and annoying interference, use the recommended accessories only.

FOR YOUR SAFETY

DO NOT REMOVE THE OUTER COVER

To prevent electric shock, do not remove the cover. No user serviceable parts inside. Refer servicing to qualified service personnel.

2.3.2. Caution for AC Mains Lead

For your safety, please read the following text carefully.

This appliance is supplied with a moulded three-pin mains plug for your safety and convenience.

A 5-ampere fuse is fitted in this plug.

Should the fuse need to be replaced please ensure that the replacement fuse has a rating of 5 amperes and it is approved by ASTA or BSI to BS1362

Check for the ASRA mark or the BSI mark on the body of the fuse.

If the plug contains a removable fuse cover you must ensure that it is refitted when the fuse is replaced.

If you lose the fuse cover, the plug must not be used until a replacement cover is obtained.

A replacement fuse cover can be purchased from your local Panasonic Dealer.

If the fitted moulded plug is unsuitable for the socket outlet in your home then the fuse should be removed and the plug cut off and disposed of safely.

There is a danger of severe electrical shock if the cut off plug is inserted into any 13-ampere socket.

If a new plug is to be fitted please observe the wiring code as shown below.

If in any doubt, please consult a qualified electrician.

2.3.2.1. Important

The wires in this mains lead are coloured in accordance with the following code:

Blue	Neutral
Brown	Live

As the colours of the wires in the mains lead of this appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is coloured BLUE must be connected to the terminal in the plug which is marked with the letter N or coloured BLACK.

The wire which is coloured BROWN must be connected to the terminal in the plug which is marked with the letter L or coloured RED.

Under no circumstances should either of these wires be connected to the earth terminal of the three pin plug, marked with the letter E or the Earth Symbol.

2.3.2.2. Before Use

Remove the Connector Cover as follows.

2.3.2.3. How to Replace the Fuse

1. Remove the Fuse Cover with a screwdriver.

2. Replace the fuse and attach the Fuse cover.

2.4. How to Replace the Lithium Battery

2.4.1. Replacement Procedure

1. Remove the Main PCB (Refer to Disassembly Procedures.)
2. Remove the Lithium battery (Ref. No. "Z001" at component side of Main PCB) and then replace it into new one.

NOTE:

This Lithium battery is a critical component.

(Type No.: ML-421S/ZT **Manufactured by Matsushita Battery Industrial Co.,Ltd.**)

It must never be subjected to excessive heat or discharge.

It must therefore only be fitted in requirement designed specifically for its use.

Replacement batteries must be of same type and manufacture.

They must be fitted in the same manner and location as the original battery, with the correct polarity contacts observed.

Do not attempt to re-charge the old battery or re-use it for any other purpose.

It should be disposed of in waste products destined for burial rather than incineration.

(For English)

CAUTION

Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type recommended by the manufacturer.
Dispose of used batteries according to the manufacturer's instructions.

(For French)

PRECAUTION

Le fait de remplacer incorrectement la pile peut présenter des risques d'explosion.
Remplacer la pile uniquement par une pile identique ou de type équivalent recommandée par le fabricant. Se débarrasser des piles usagées conformément aux instructions du fabricant.

(For German)

VORSICHT

Bei einer falsch eingesetzten Batterie besteht Explosionsgefahr. Nur mit einer vom Hersteller empfohlenen Batterie vom gleichen Typ ersetzen.
Verbrauchte Batterien beim Fachhändler oder einer Sammelstelle für Sonderstoffe abliefern.

(For Swedish)

VARNING

Explosionsfara vid felaktigt batteribyte.
Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattilverkaren.
Kassera använt batteri enligt fabrikantens instruktion.

(For Norwegian)

ADVARSEL!

Lithiumbatteri-Eksplosionsfare ved feilagtig håndtering.
Udskiftning må kun ske med batteri af samme fabrikat og type.
Levér det brugte batteri tilbage til leverandøren.

(For Finnish)

VAROITUS

Paristo voi räjähtää, jos se on virheellisesti asennettu.
Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin.
Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

NOTE:

Above caution is applicable for a battery pack which is for DMC-LX1 series, as well.

3 Service Navigation

3.1. Introduction

This service manual contains technical information, which allow service personnel's to understand and service this model. Please place orders using the parts list and not the drawing reference numbers.

If the circuit is changed or modified, the information will be followed by service manual to be controlled with original service manual.

3.2. About Lead Free Solder (PbF)

Distinction of PbF PCB:

PCBs (manufactured) using lead free solder will have a PbF stamp on the PCB.

Caution:

- Pb free solder has a higher melting point than standard solder, Typically the melting point is 50-70°F (30-40°C) higher. Please use a high temperature soldering iron. In case of soldering iron with temperature control, please set it to 700±20°F (370±10°C).
- Pb free solder will tend to splash when heated too high (about 1100°F/600°C).

When soldering or unsoldering, please completely remove all of the solder on the pins or solder area, and be sure to heat the soldering points with the Pb free solder until it melts enough.

3.3. Important Notice 1:(Other than U.S.A. and Canadian Market)

1. The service manual does not contain the following information, because of the impossibility of servicing at component level.
 - a. Schematic diagram, Block Diagram and PCB layout of Main PCB.
 - b. Parts list for individual parts of Main PCB.When a part replacement is required for repairing Main PCB, replace as an assembled parts. (Main PCB)
2. The following category is/are recycle module part. please send it/them to Central Repair Center.
 - MAIN PCB (VEP56026A) : Excluding replacement of Lithium Battery

3.4. How to Define the Model Suffix (NTSC or PAL model)

There are seven kinds of DMC-LX1, regardless of the colours.

- a) DMC-LX1S
- b) DMC-LX1PP
- c) DMC-LX1EB/EG/EGM/GN
- d) DMC-LX1GC/SG
- e) DMC-LX1GD
- f) DMC-LX1GT
- g) DMC-LX1GK

(DMC-LX1S is exclusively Japan domestic model.)

What is the difference is that the "INITIAL SETTING" data which is stored in Flash ROM mounted on Main PCB.

3.4.1. Defining methods:

To define the model suffix to be serviced, refer to the nameplate which is putted on the bottom side of the Unit.

a) DMC-LX1S

DMC-LX1S is exclusively Japan domestic model.

b) DMC-LX1PP

The nameplate for this model show the following Safty registration mark.

c) DMC-LX1EB/EG/EGM/GN

The nameplate for these models show the following Safty registration mark.

d) DMC-LX1GC/SG

The nameplate for these models show the following Safty registration mark.

e) DMC-LX1GD

The nameplate for this model show the following Safty registration mark.

f) DMC-LX1GT

The nameplate for this model show the following Safty registration mark.

g) DMC-LX1GK

The nameplate for this model do not show any above Safty registration mark.

NOTE:

After replacing the MAIN PCB, be sure to achieve adjustment.

The adjustment instruction is available at "software download" on the "Support Information from NWBG-PAVC" web-site in "TSN system", together with Maintenance software.

3.4.2. INITIAL SETTINGS:

CAUTION:

NEVER select “NONE(JAPAN)” if the unit is other than “JAPAN” model.

Other-wise, it can not be reset to the other.

When you replace the Main PCB be sure to perform the initial settings after achieving the Adjustment, by ordering the following procedure in accordance with model suffix.

• Step 1. The temporary cancellation of factory setting:

Set the mode dial to “[P]”.

While keep pressing [Optical Image Stabilizer] and “[UP] of Cross key” simultaneously, turn the Power on.

• Step 2. The cancellation of factory setting:

Set the mode dial to “[Playback]”.

While keep pressing [Optical Image Stabilizer] and “[UP] of Cross key” simultaneously, turn the Power on.

• Step 3. Turn the Power on:

Set the mode dial to “[P]”, and then turn the Power on.

• Step 4. Display the INITIAL SETTING:

While keep pressing [MENU] and “[RIGHT] of Cross key” simultaneously, turn the Power off.

• Step 5. Set the INITIAL SETTING:

Select the area with pressing “[UP] / [DOWN] of Cross key”, and then press the “[RIGHT] of Cross key”.

The only set area is displayed, and then press the “[RIGHT] of Cross key” after confirmation.

(The unit is powered off automatically.)

Confirm the display of “PLEASE SET THE CLOCK” in English when the unit is turned on again.

• Step 6. CONFIRMATION:

The display shows “PLEASE SET THE CLOCK” when turn the Power on again.

Connect the unit to PC with USB cable and is detected as removable media.

(For China and Taiwan marker, the display shows “PLEASE SET THE CLOCK” in Chinese.)

1) As for your reference Default setting condition is given in the following table.

• Default setting (After “INITIAL SETTINGS”)

	MODEL	VIDEO OUTPUT	LANGUAGE	DATE	REMARKS
a)	DMC-LX1S	NTSC	Japanese	Year/Month/Date	
b)	DMC-LX1PP	NTSC	English	Month/Date/Year	
c)	DMC-LX1EB/EG/EGM/GC/GN/SG	PAL	English	Date/Month/Year	
d)	DMC-LX1GK	PAL	Chinese (simplified)	Year/Month/Date	
e)	DMC-LX1GT	NTSC	Chinese (traditional)	Year/Month/Date	
f)	DMC-LX1GD	NTSC	English	Year/Month/Date	

4 Specifications

Digital Camera: Information for your safety

Power Source:	DC 5.1 V
Power Consumption:	2.1 W (When recording) 1.0 W (When playing back)
Camera Effective pixels:	8,400,000 pixels
Image sensor:	1/1.65" CCD, total pixel number 8,610,000 pixels Primary color filter
Lens:	Optical 4x zoom, f=6.3 to 25.2 mm [35 mm film camera equivalent: 28 to 112 mm (aspect ratio [16:9])]/F2.8 to F4.9 Max. 4x
Digital zoom:	In [16:9] aspect : Up to 5x
Extended optical zoom:	In [3:2] aspect : Up to 5.1x In [4:3] aspect : Up to 5.6x (Any resolution except the maximum for the selected aspect ratio)
Focus:	Normal/Macro/Manual 9-area-focusing/3-area-focusing (high speed)/1-area-focusing (high speed)/1-area-focusing/Spot-focusing
Focus range:	Normal AF: 1.64 feet (50 cm) (Wide)/3.94 feet (120 cm) (Tele) to ∞ Macro: 0.16 feet (5 cm) (Wide)/0.98 feet (30 cm) (Tele) to ∞
Shutter system:	Electronic shutter+Mechanical shutter
Shutter speed:	60 to 1/2,000th
Burst recording	
Burst speed (max.):	3 frames/second (high speed), 2 frames/second (low speed), 2 frames/second (unlimited)
Number of recordable pictures (max.):	9 frames (standard), 5 frames (fine), Depends on the capacity of the card. (unlimited) (Performance in burst recording is only with SD Memory Card. MultiMediaCard performance will be less.)
Motion picture recording:	Aspect ratio [16:9]:848x480 pixels (30 or 10 frames/second with audio) Aspect ratio [4:3]:320x240 pixels, 640x480 pixels (30 or 10 frames/second with audio) (The maximum recording time depends on the capacity of the card.)
ISO sensitivity:	AUTO/80/100/200/400
White balance:	AUTO/Daylight/Cloudy/Halogen/White set 1/White set 2
Exposure (AE):	Program AE Exposure compensation (1/3 EV Step, -2 to +2 EV)
Metering mode:	Multiple/Center weighted/Spot
LCD monitor:	Low-temperature polycrystalline TFT LCD 2.5" (Approx. 207,000 pixels) (field of view ratio about 100%)
Flash:	Flash range: (ISO AUTO) Approx. 1.97 feet (60 cm) to 13.5 feet (4.1 m) AUTO, AUTO/Red-eye reduction, Forced ON (Forced ON/Red-eye reduction), Slow sync./Red-eye reduction, Forced OFF

Microphone:	Monaural
Speaker:	Monaural
Recording media:	SD Memory Card/MultiMediaCard
Picture size:	
Still picture:	Aspect ratio [16:9]: 3840x2160 pixels, 3072x1728 pixels, 1920x1080 pixels Aspect ratio [3:2]: 3248x2160 pixels, 2560x1712 pixels, 2048x1360 pixels Aspect ratio [4:3]: 2880x2160 pixels, 2304x1728 pixels, 2048x1536 pixels, 1600x1200 pixels, 1280x960 pixels
Motion picture:	Aspect ratio [16:9]: 848x480 pixels Aspect ratio [4:3]: 640x480 pixels, 320x240 pixels TIFF/Fine/Standard/RAW
Quality:	
Recording file format	
Still Picture:	JPEG (Design rule for Camera File system, based on Exif 2.2 standard)/DPOF compliant
Picture with audio:	JPEG (Design rule for Camera File system, based on Exif 2.2 standard)+QuickTime (picture with audio)
Motion pictures:	QuickTime Motion JPEG (audio recordable)
Interface	
Digital:	USB 2.0 (Full Speed)
Analog video/audio:	NTSC/PAL Composite (Switched by menu), Audio line output (monaural)
Terminal	
AV OUT/DIGITAL:	AV/USB Dedicated jack (8 pin)
DC IN:	Dedicated jack (2 pin)
Dimensions:	4 1/8"(W) x 2 1/4"(H) x 1"(D) (105.7 mm (W)x55.8 mm (H)x25.6 mm (D)) (excluding the projection part)
Weight:	Approx. 6.50 oz/185 g (excluding Memory Card, battery and Lens Cap) Approx. 7.80 oz/220 g (with Memory Card, battery and Lens Cap)
Operating Temperature:	32 °F to 104 °F (0 °C to 40 °C)
Operating Humidity:	10 % to 80 %
Battery Charger:	Information for your safety
Input:	110 to 240 V ~ 50/60 Hz, 0.2 A
Output:	CHARGE 4.2 V=0.8 A
Equipment mobility:	Movable
Battery Pack (lithium-ion)	
(Panasonic CGA-S005A):	Information for your safety
Voltage/capacity:	3.7 V, 1150 mAh

 - Please be sure to use genuine Panasonic AC adaptor (DMW-AC5; optional).
 - This camera cannot charge the battery even though the AC adaptor (DMW-AC5; optional) is connected to it.
- 26 Terminal Cover

- 27 Card/Battery Door
- 28 Tripod Receptacle
 - When you use a tripod, make sure the tripod is stable with the camera attached to it.

■ The Mode Dial

This camera has a mode dial to suit for recording of many kinds of scenes. Select the desired mode and enjoy the variety of recording. Rotate the mode dial slowly and securely.

P : Program AE mode

The exposure is automatically adjusted by the camera.

A : Aperture-priority AE

The shutter speed is automatically determined by the aperture value you set.

S : Shutter-priority AE

The aperture value is automatically determined by the shutter speed you set.

M : Manual exposure

The exposure is adjusted by the aperture value and the shutter speed which are manually adjusted.

: Motion picture mode

This mode allows you to record motion pictures with audio.

SCN1 : Scene mode 1

SCN2 : Scene mode 2

This mode allows you to take pictures depending on the recording scenes.

This mode also allows you to set [SCENE MENU] (P26) on the [SETUP] menu to [OFF] and set the scene modes which are frequently used to [SCN1] and [SCN2] on the mode dial.

It is convenient because you can select the scene mode quickly and minimize the operation.

: Auto mode

This is the recommended mode for beginners.

: Playback mode

This mode allows you to play back recorded pictures.

6 Service Mode

6.1. Error Code Memory Function

1. General description

This unit is equipped with history of error code memory function, and can be memorized 32 error codes in sequence from the latest. When the error is occurred more than 32, oldest error is overwritten in sequence.

The error code is not memorized when the power supply is shut down forcibly (when the unit is powered on by the battery, the battery is pulled out) because the error code is memorized to FLASH ROM when the unit is powered off.

2. How to display

The error code can be displayed by the following procedure:

Before perform the error code memory function, connect the AC adaptor or insert the battery, and insert the SD card.

• 1. The temporary cancellation of factory setting:

Set the mode dial to "[P]".

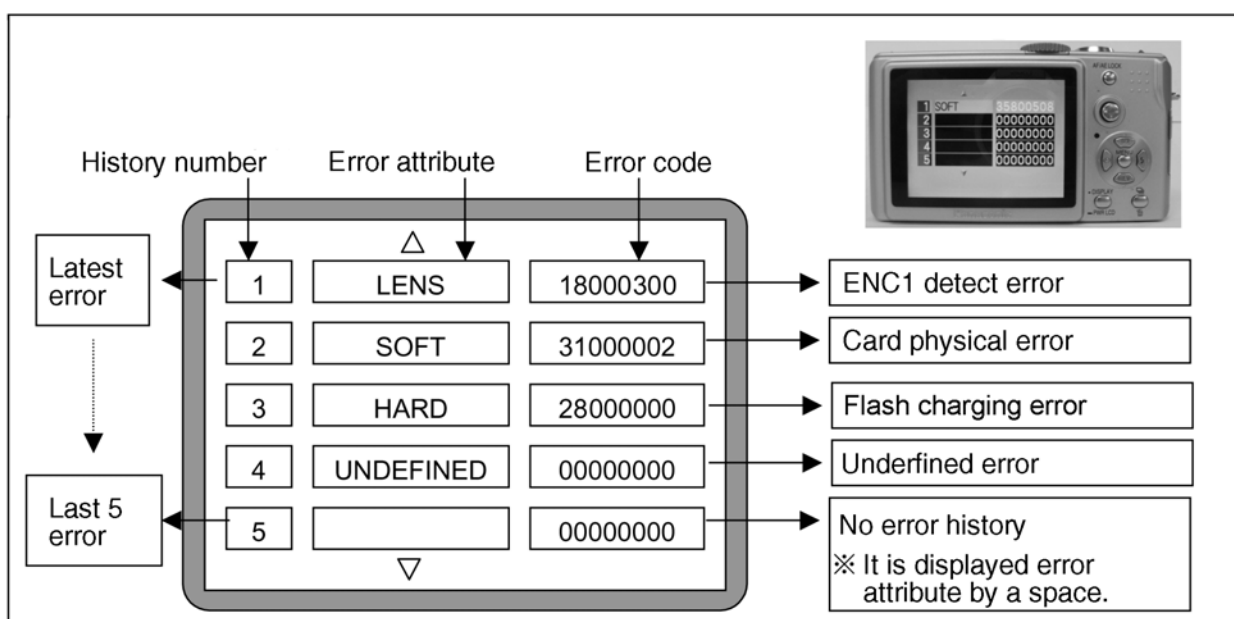

While pressing [Optical Image Stabilizer Button] and "[UP] of Cross key" simultaneously and hold them, turn the Power on.

• 2. The display of error code:

Press [Optical Image Stabilizer Button], [MENU] and "[LEFT] of Cross key" simultaneously with the step 1 condition.

The display is changed as shown below when the above buttons is pressed simultaneously.

Normal display → Error code display → Operation history display → Normal display →

Example of Error Code Display

• 3. The change of display:

The error code can be memorized 32 error codes in sequence, however it is displayed 5 errors on the LCD.

Display can be changed by the following procedure:

"[UP] or [DOWN] of Cross key" : It can be scroll up or down one.

"[LEFT] or [RIGHT] of Cross key" : It can be display last 5 error or another 5 error.

• 4. How to read the error code:

One error code is displayed for 8 bit, the contents of error codes is indicated the table as shown below.

History number	Error attribute	Error code
1	△ LENS	18000300
2	SOFT	31000002
3	HARD	28000000
4	UNDEFINED	00000000
5	▽	00000000

Attribute	Main item	Sub item	Error code		Contents (Upper)			
			High 4 bits	Low 4 bits	Check point (Lower)			
LENS	Lens drive	OIS	1800	1000	PSD (X) error. Hall element (X axis) position detect error in OIS unit. OIS Unit			
				2000	PSD (Y) error. Hall element (Y axis) position detect error in OIS unit. OIS Unit			
				3000	GYRO (X) error. Gyro (IC7102: X axis) detect error on Main C.B.A.. IC7102 (Gyro element) or IC6001 (VENUS 2)			
				4000	GYRO (Y) error. Gyro (IC7101: Y axis) detect error on Main C.B.A.. IC7101 (Gyro element) or IC6001 (VENUS 2)			
				5000	MREF error (Reference voltage error). IC7002 (LENS drive) or IC6001 (VENUS 2)			
				6000	Drive voltage (X) error. VENUS 2 AD value error, LENS Unit, LENS flex breaks etc.			
				7000	Drive voltage (Y) error. VENUS 2 AD value error, LENS Unit, LENS flex breaks etc.			
				C.B./Zoom		0100	HP Low detect error (C.B. encoder (full retract) always Low detect). FP9001-(30) signal line or IC6001 (VENUS 2)	
						0200	HP High detect error (C.B. encoder (full retract) always High detect). FP9001-(30) signal line or IC6001 (VENUS 2)	
						0300	ENC1 detect error (C.B. motor encoder detect error). FP9001-(5) signal line or IC6001 (VENUS 2)

• 5. How to returned to Normal Display:

Turn the power off and on, to exit from Error code display mode.

NOTE:

The error code can not be initialized by the unit only.

6.2. Confirmation of Firmware Version

The Firmware version can be confirmed by ordering the following steps:.

- **Step 1. The temporary cancellation of factory setting:**

Set the mode dial to "[P]".

While keep pressing [Optical Image Stabilizer] and "[UP] of Cross key" simultaneously, turn the power on with inserting the SD memory card which has a few photo data.

- **Step 2. Confirm the version:**

Set the mode dial to "[Playback]" and then press [DISPLAY] to switch to LCD with indication. (Fig. A)

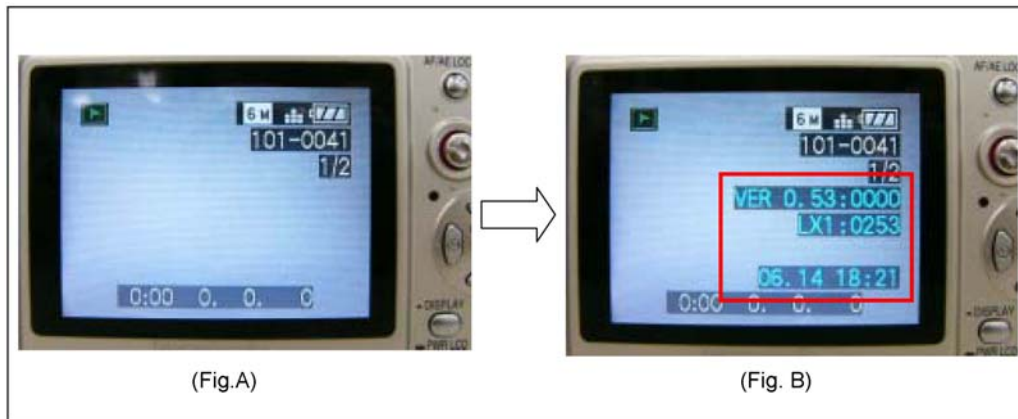

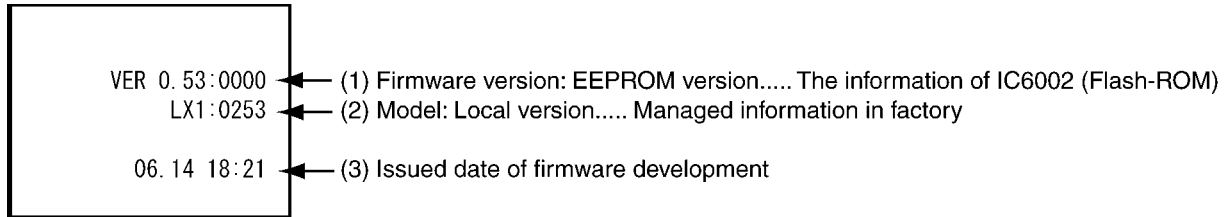

Press [Optical Image Stabilizer] and "[DOWN] of Cross key" simultaneously. (No need to keep pressing.)

(The version information is displayed on the LCD with light blue colour letters.) (Fig. B)

CAUTION:

The version information does not display if the LCD has switched to LCD with indication already.

In this case, press [DISPLAY] to switch to LCD with indication.

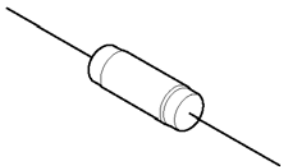

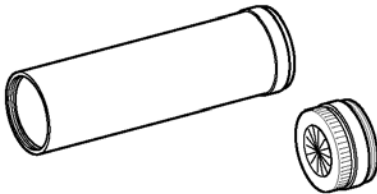

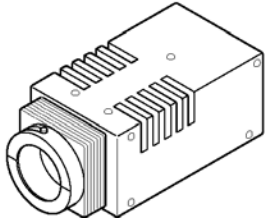

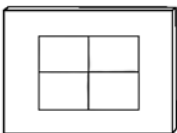

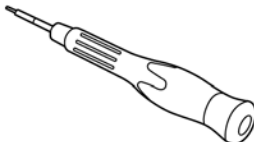

<Point>

- The firmware version and EEPROM version can be confirmed with the information (1).
- The information (2), (3) are just reference.

7 Service Fixture & Tools

7.1. Service Fixture and Tools

The following Service Fixture and tools are used for checking and servicing this unit.

Resistor for Discharging ERG5SJ102	Infinity Lens (with Focus Chart) VFK1164TCM02	LIGHT BOX VFK1164TDVLB
 <p>An equivalent type of Resistor may be used.</p>		 <p>※ with DC Cable</p>
TR Chart VFK1975	Lens Cleaning Kit (BK) VFK1900BK	Grease (for lens) VFK1829
	 <p>* Only supplied as 10 set/box.</p>	
Furoyl grease (for focus motor) VFK1850	T3 Trox Driver VFK1755	
		

7.2. When Replacing the Main PCB

After replacing the MAIN PCB, be sure to achieve adjustment.

The adjustment instruction is available at "software download" on the "Support Information from NWBG-PAVC" web-site in "TSN system", together with Maintenance software.

7.3. Service Position

This Service Position is used for checking and replacing parts. Use the following Extension cables for servicing.

Table S1 Extension Cable List

No.	Parts No.	Connection	Form
1	VFK1951	FP9001 (MAIN) - LENS FPC	39PIN 0.3 FFC
2	VFK1480	FP9002 (MAIN) - AFMF-ASPECT FPC	6PIN 0.5 FFC
3	VFK1976	FP9003 (MAIN) - LCD FPC	19PIN 0.5 FFC
4	VFK1974	FP9004 (MAIN) - BACKLIGHT FPC	4PIN 0.5 FFC
5	VFK1950	FP9005 (MAIN) - CCD FPC	33PIN 0.3 FFC
6	VFK1582A1225	FP9006 (MAIN) - FP8001 (FLASH)	12PIN 0.5 FFC
7	VFK1576DSC04	P9001 (MAIN) - AF ASSIST PCB	2PIN CABLE
8	VFK1870	PP9001 (MAIN) - PP9901 (TOP OPERATION)	30PIN B to B
9	VFK1576DSC03	P8001 (FLASH) - FLASH UNIT	2PIN CABLE
10	VFK1576DC202	P8002 (FLASH) - FLASH UNIT	2PIN CABLE

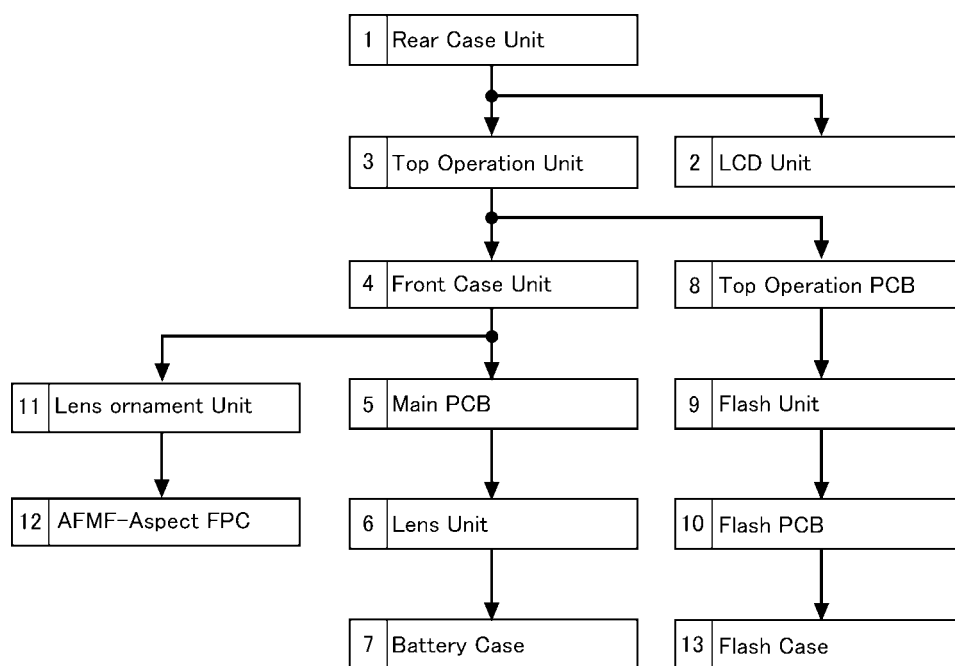

CAUTION-1. (When servicing FLASH PCB)

1. Be sure to discharge the capacitor on FLASH PCB.
Refer to "How to Discharge the Capacitor on Flash PCB".
The capacitor voltage is not lowered soon even if the AC Cord is unplugged or the battery is removed.
2. Be careful of the high voltage circuit on FLASH PCB.
3. DO NOT allow other parts to touch the high voltage circuit on FLASH PCB.

8.3.1. Removal of the Rear Case Unit

NOTE:

When servicing and disassembling, remove the card and battery from the unit.

- Card
- Battery
- Screw (A) × 3
- FP9003 (Flex)
- FP9004 (Flex)
- Screw (B) × 1

NOTE :(When Replacing)

Remove a FPC in the direction of an arrow ② after opening a cover in the arrow ① direction.

Fig. D1

8.3.2. Removal of the LCD Unit

Fig. D2

8.3.3. Removal of the Top Operation Unit

Fig. D6

8.3.7. Removal of the Battery Case

Fig. D7

8.3.8. Removal of the Top Operation PCB

Fig. D8

NOTE: (When installing)

- Install the switch's boss and a power knob.
- Match a <D cut> part of a mode dial with a <D cut> part of coupling plate and install it.

Fig. D9

8.3.9. Removal of the Flash Unit

- Screw (K) × 1
- Locking tab × 1
- Nut Plate

Screw (K)

NOTE:(When Replacing)

- Exclude a flash unit after taking off a nut plate.

Fig. D10

8.3.10. Removal of the Flash PCB

Fig. D11

8.3.11. Removal of the Lens Ornament Unit

Fig. D12

8.3.12. Removal of the MF-AF Aspect FPC

Fig. D13

Fig. D14

NOTE: (When Assembling)

Confirm the contents as shown below.

- Condition of the screw is tightened.
- Assembling condition of mechanism parts (distortion, space etc.)
- Dust and dirt of the lens, display condition of the LCD (gradient etc.)
- Dust and dirt of the LCD

8.4. Disassembly Procedure for the Lens

NOTE: When Disassembling and Assembling for the Lens

1. To prevent the lens from catching the dust and dirt, perform the following procedures with the CCD unit is installing.
Disassembling procedures for the CCD unit, refer to item 8.6.
2. Take care that the dust and dirt are not entered into the lens.
In case of the dust is putted on the lens, blow off them by airbrush.
3. Do not touch the surface of lens.
4. Use lens cleaning KIT (BK)(VFK1900BK).
5. Apply the grease (VFK1829) to the point where is shown to "Grease apply" in the figure.
When the grease is applied, use a toothpick and apply thinly.

8.4.1. Removal of the Zoom Motor Unit and Master Flange Unit

1. Remove the solders (2 points).
2. Remove the lock (4 points).
3. Unscrew the 5 screws (A).
4. Remove the Zoom Motor Unit to the indicated by arrow.
5. Remove the master flange unit.

8.4.2. Removal of the Drive/Direct Unit, 1st Lens Frame/2nd Lens Frame Move Unit, 3rd Lens Frame Move Unit

1. Turn the drive gear to the indicated by arrow fully.

1. Push the drive unit to the indicated by arrow from lens side, and then remove the unit of drive/direct unit, 1st lens frame/2nd lens frame move unit, 3rd lens frame move unit from the fixed frame unit.

1. Push the 1st lens frame move unit to the indicated by arrow from lens side, and then remove the unit of 1st lens frame/2nd lens frame move/ 3rd lens frame moveunit from the drive/direct unit.

1. Push the 3rd lens frame move unit to the indicated by arrow.

8.4.3. Removal of the Direct Frame

8.4.4. Removal of the 2nd Lens Frame Move Unit

8.5. Assembly Procedure for the Lens

8.5.1. Phase alignment of the Direct Frame and Drive Frame Unit

- Align the \triangle mark, and then install the lens ring to fix frame unit.

- Turn the Lens ring in the direction of an arrow. (about 0.4 in.) and nine places of the groove at the position are matched and installed.

8.5.2. Phase alignment of the Drive/Direct Unit and Fixed Frame

- Align the \triangle mark, and then install the drive frame unit and lens ring to fix frame unit.
- ※ When fix frame unit and drive frame unit are installed, it is confirmed that both gears bite each other surely.

8.5.4. Phase alignment of the 2nd Lens Frame Move Unit and Fixed Frame

- Align the \triangle mark, and then install the 2nd lens frame unit to fix frame unit.

8.5.3. Phase alignment of the 1st Lens Frame Unit and Fixed Frame

- Align the \triangle mark and ① mark then install the 1st lens frame unit to fix frame unit.

8.5.5. Phase alignment of the 3rd Lens Frame Move Unit and Fixed Frame

- Align the \triangle mark and ③ mark then install the 3rd lens frame unit to fix frame.

NOTE: (When Installing)

- Fix the FPC guide plate to the install of fix frame.

8.5.6. Assembly for the Zoom Motor Unit and Master Flange Unit

- Install the guide pin of fix frame to the hole of master flange unit.

- Set the guide pin of zoom motor to the hole of fix frame unit.

8.6. Removal of the CCD

To prevent the CCD unit from catching the dust and dirt, do not remove the CCD unit except for replacing.

9 Measurements and Adjustments

9.1. Adjustment Procedures

Even if the MAIN PCB is replaced as a unit, it must be achieved the adjustment and factory setting. The adjustment in this unit is separated two types as shown below.

The adjustment instruction is available at "Software download" on the "Support Information from NWBG-PAVC" web-site in "TSN System".

1. **Main unit adjustment:** All adjustments except for LCD adjustment.

This unit mounts the adjustment software for main unit, it wouldn't need the connection between the PC and this unit with USB cable.

2. **LCD adjustment:** Adjustment for LCD.

It need the connection between the PC and this unit with USB cable.

The adjustment instruction is available at "Software download" on the "Support Information from NWBG-PAVC" web-site in "TSN System", together with maintenance software.

10 Maintenance

10.1. Cleanig Lens and LCD Panel

Do not touch the surface of lens and LCD Panel with your hand.

When cleaning the lens, use air-Blower to blow off the dust.

When cleaning the LCD Panel, dampen the lens cleaning paper with lens cleaner, and the gently wipe the their surface.

Note:

A lens cleaning paper and lens cleaner are available at local camera shops and market place.

S1. ABOUT INDICATION OF THE SCHEMATIC DIAGRAMS

S1.1. IMPORTANT SAFETY NOTICE:

COMPONENTS IDENTIFIED WITH THE MARK  HAVE THE SPECIAL CHARACTERISTICS FOR SAFETY. WHEN REPLACING ANY OF THESE COMPONENTS USE ONLY THE SAME TYPE.

- 1.Although reference number of the parts is indicated on the P.C.B. drawing and/or schematic diagrams, it is NOT mounted on the P.C.B. when it is displayed with "\$" mark.
- 2.It is only the "Test Round" and no terminal (Pin) is available on the P.C.B. when the TP (Test Point) indicated as "●" mark.
- 3.The voltage being indicated on the schematic diagram is measured in "Standard-Playback" mode when there is no specify mode is mentioned.
- 4.Although the voltage and waveform available on here is measured with standard frame, it may be differ from actual measurement due to modification of circuit and so on.
- 5.The voltage being indicated here may be include observational-error (deviation) due to internal-resistance and/or reactance of equipment. Therefore, handle the value indicated on here as reference.
- 6.Use the parts number indicated on the Replacement Parts List .
- 7.Indication on Schematic diagrams:

S5. REPLACEMENT PARTS LIST

Note: 1.* Be sure to make your orders of replacement parts according to this list.

2. IMPORTANT SAFETY NOTICE

Components identified with the mark  have the special characteristics for safety.
When replacing any of these components, use only the same type.

3. Unless otherwise specified,

All resistors are in OHMS, K=1,000 OHMS. All capacitors are in MICRO-FARADS (uf), P=uuF.

4. The P.C.Board units marked with "■" show below the main assembled parts.

5. The marking (RTL) indicates the retention time is limited for this item. After the discontinuation of this assembly in production, it will no longer be available.

6. Supply of CD-ROM, in accordance with license protection, is allowable as replacement parts only for customers who accidentally damaged or lost their own.

E.S.D. standards for Electrostatically Sensitive Devices, refer to “PREVENTION OF ELECTROSTATIC DISCHARGE (ESD) TO ELECTROSTATICALLY SENSITIVE (ES) DEVICES” section.

Definition of Parts supplier:

1. Parts marked with [MBI] in the remarks column are supplied from “Matsushita Battery Industrial co., Ltd.”.
2. Parts marked with [PAVC-CSG] in the remarks column are supplied from PAVC COMPANY CS Group (PAVC-CSG). Others are supplied from MKE SAIJYO (MKE).
